

Tiger Calcium's 50+ spray trucks are all equipped with industry-leading spray application technology to ensure maximum application coverage and efficiency.

The Raven Flow Meter provides precise monitoring and control of liquid application that, when paired with our custom, calibrated spray bars and nozzles, guarantees a consistently uniform application, easily conforming to the most demanding dust control specifications. Controlled from within the spray truck cab, instantaneous management of application ensures both product flow management and safe work practices that meet all customers' requirements.

Feature	Benefit	Value
Pump powered spray system	Spray pattern is constant, with uniform pressure. All road material is equally treated making sure product performs at its highest potential	Application performance lasts longer requiring less work in a season saving thousands of dollars in potential rework and spot-spraying
Raven Flow Meter	Real time feedback provided to drivers allowing for adjustments to be made to keep consistent application rate	Contracted application rates and total volume sprayed are assured
	Metered verification of spray volume	Eliminates risk of total volume sprayed being less than the contracted volume
In-cab controls	Instant shut off prevents product waste and promotes safety for operators and customers	No wasted product. Avoids costly damage to infrastructure and the environment
